I build the backend and infrastructure behind AI applications, LLM and computer vision, that take repetitive work off people's hands. Shipped a serverless email pipeline that has run in production for over a year (up to 35k emails/month), built agentic tooling for HPC experiments, and ran 110k+ GPU jobs.

Education

University of British Columbia | Vancouver, Canada
M.Sc. in Computer Science, Average 92.8%, Advisor: Kwang Moo Yi, BPOC Graduate Excellence Award | Sep 2024 – Nov 2026

National Taiwan University | Taipei, Taiwan
B.Sc. in Computer Science and Information Engineering, GPA 3.92/4.0 | 2019 – 2023

Experience

University of British Columbia | Vancouver, Canada
Master of Science, Computer Science | Sep 2024 – Nov 2026
Research Assistant, Computer Vision Lab | 2023 – 2024

- **Agentic HPC ops:** built a **Claude Code** harness (48 skills, 6 subagents, safety hooks, post-mortem rules) that takes experiments from code change to PR: ports baselines, submits, monitors and fixes Slurm jobs over SSH, and parses results, so researchers stop babysitting experiments. Parallel sessions opened **281 PRs**; **227 were merged** after review.
- **GPU fleet:** ran **110k+ Slurm jobs (about 15.8k GPU-hours)** across 3 providers (lab-owned, UBC Sockeye, Compute Canada), peaking at **127 concurrent GPUs**; packaged baselines as **Apptainer** images.
- **Job scheduling:** sized eval jobs from measured per-frame cost to fit the 3-hour limit: **864 jobs** instead of about 11.6k.
- **Throughput:** cut per-scene eval for CogNVS from 3.5 hours to 21 minutes (batched across GPUs) and Lyra from 3.75 hours to 1 hour (6 trajectory jobs in parallel).
- **Research:** showed that single-image novel view synthesis (NVS) benchmarks score misaligned predictions; proposed feature matching, PnP and co-visibility masking, and re-benchmarked **11 baselines** on 4 datasets (1.7k test views).

TravoAI (MyProGuide) | Remote
Software Engineer (Part-time) | Jul 2024 – Mar 2025

- **Serverless email pipeline:** built an **AWS SES, Lambda and S3** pipeline with parsers for 12 OTAs across 4 countries (Klook, KKday, Viator and others) that reads cancellation emails and updates orders via API, so Ops no longer processes cancellations by hand; in production 1+ year at up to **35k emails/month**.
- **LLM tooling:** prototyped a **text-to-SQL** agent (LangChain, Gemini) that creates PostgreSQL test accounts.
- **Flutter app:** built a tour-guide app from scratch through spec-first issues and reviewed PRs (BLoC, OAuth, CI).

GoGoX | Taipei, Taiwan (remote from Vancouver)
Software Engineer, Data Scientist | Jun 2023 – Jun 2024
Data Scientist Intern | Sep 2022 – Jun 2023

- **LLM support bot:** prototyped a RAG chatbot (**OpenAI, LangChain, Pinecone**) on **GCP** for routine customer-service questions; cut latency by 2 seconds with **Redis Stack**.
- **Driver stopping model:** extracted the **GraphHopper** routing engine from a deprecated Java dispatch system into a **Docker Compose** service with a Python interface; ran counterfactual analysis on driver stop probability.
- **Labeling automation:** ML model on GPS/order data that generates pickup-time labels that didn't exist before, with **autoencoder** anomaly filtering.
- **GPS map matching:** **HMM** matching to OpenStreetMap (Python, shapely) to build a travel-time database for ETA.

ASUS Intelligent Cloud Services (AICS) | Taipei, Taiwan
Software Engineering Intern | Jul 2022 – Sep 2022

- Extended Selenium IDE with **Electron / Node.js**, so QA could automate 19 of 23 test cases previously run by hand.

Publications

- **WACV 2027** – *Aligning Misaligned Benchmarks for Single-View Novel View Synthesis.* **Y.-C. Tseng**, E. Dong, J.-g. Kwak, G. Sharma, S. Kheradmand, S. Garbin, H. Isack, K. M. Yi.

Teaching

- **UBC 2025** – *CPSC 425: Computer Vision.* Teaching Assistant.
- **UBC 2024** – *CPSC 259: Data Structures and Algorithms for Electrical Engineers.* Teaching Assistant.
- **NTU 2022** – *Deep Learning for Computer Vision.* Teaching Assistant.
- **NTU 2022** – *Network Administration and System Administration.* Teaching Assistant.
- **NTU 2021** – *Data Structures and Algorithms.* Teaching Assistant.

Skills

- **Backend & Infra:** AWS (Lambda, S3, SES), Docker, Docker Compose, Slurm, Apptainer, GitHub Actions, GCP, Cloudflare Workers, PostgreSQL, Redis
- **AI:** PyTorch, LLM applications and agents (LangChain, RAG, OpenAI, Gemini, Pinecone, Claude Code), computer vision, 3D vision
- **Languages:** Python, C/C++, CUDA, TypeScript/Node.js, Dart/Flutter, SQL
- **Spoken:** Mandarin (native), English (fluent)
- **Open source:** added per-user filtering to **nvtop**, a GPU monitoring tool (C).
